

PV3000 Series

Three-Way Valve and Actuator
Assemblies

Description

The PV3000 Series three-way valves are designed to provide flow control for HVAC chilled and hot water systems. The valve and actuator assemblies offer lower Cv ratings, providing the performance of a globe valve with the economy of a ball valve.

The PV3000 Series features:

- Actuators are available with a NEMA 4 (IP66) water and dust tight high protection housings
- All actuators include a standard 1/2" conduit connector
- Actuators include fast and easy manual positioning feature to position the valve without power applied
- Actuators are form-fit mounted directly to the control shaft of the valve.
- Compact size to fit in tight spaces
- Available with female threaded NPT or sweat end connections
