

# End of Life Notice: Certain QD2040 Devices Manufactured Prior to 2010

March 17, 2015

This end of life notice affects the following TCS Basys Controls products sold between 2004 and 2010:

QD2040-REG with Firmware versions 04.03.XX-Red Hat 9 (2004-2006), version 05.02.XX-Fedora Core 4 (2006-2008) and version 05.03.XX-Fedora Core 8 (2008-2010)

These devices have an Operating System (OS) that has reached its end of life. Support is no longer available for these operating systems so TCS is unable to update them either remotely or in the field. Security threats are always evolving, so these systems may put the customer's underlying network at risk to some security vulnerabilities.

TCS Basys Controls recommends replacing these devices with a current production QD Series gateway device. These devices use a current Linux OS that is upgradeable and allows Ubiquity to update the devices with ongoing security patches.
