

Sequence of Operation

Equipment occupied mode-based on time of day. Controller SZ-1 will open and close the valves to maintain an adjustable heating and cooling temperature setpoint. When the aquastat senses a change from heat to cool or cool to heat it will break or make the DI2 contact to switch the action of the valve.

Unoccupied mode-based on time of day shall operate the same as during the occupied period but with different setpoints.

4 Pipe Fan Coil Unit with 2 Position Valves
