

QE25

Tri-state Wiring Transducer

Direction

The QE25 is a tri-state wiring transducer accessory designed to work exclusively with the SZ1025b VAV box controller. The QE25 accepts signals from the SZ1025b which operate the tri-state outputs for the damper and valve.

Mounting

The QE25 is designed for mounting using two #10 sheet metal screws. The QE25 must be mounted within 3" of the right side of the SZ1025b.

Wiring

Connect the ribbon cable of the QE25 to the mating connection of the SZ1025b. See SZ1025b instructions for tri-state damper and valve wiring.
